## Both indoor AND outdoor cats need broad parasite protection

### PARASITES ARE NOT “OUTDOOR-ONLY”

Cats and kittens of every lifestyle—whether indoor-only, indoor/outdoor, or outdoor-only—can regularly come in contact with unwanted parasites.

**REVOLUTION PLUS broadens the scope of protection for cats and kittens, inside and out,** against fleas, ticks,\* ear mites, roundworms,<sup>†</sup> hookworms,<sup>‡</sup> and heartworms.

**These harmful parasites can get into any home.** Parasites hitchhike indoors on other pets or creatures, on shoes and clothes, or get inside through doors and windows.

\***Black-legged or deer tick** (*Ixodes scapularis*), **Gulf Coast tick** (*Amblyomma maculatum*), and **American dog tick** (*Dermacentor variabilis*).

<sup>†</sup>*Toxocara cati*. <sup>‡</sup>*Ancylostoma tubaeforme*.
