Solliquin[®]

BEHAVIOURAL HEALTH SUPPLEMENT

Common Causes of Anxiety

Solliquin[®] is designed to help!

Solliquin[®] is for dogs and cats to help support normal behaviour and facilitate a calming effect.

Fear and anxiety in your pet.

Fear and anxiety play major roles in a variety of canine and feline behavioural disorders.

- Fear is an emotional response to a specific object, noise, or individual that the pet perceives as a threat or danger.
- Anxiety is a reaction to an anticipated threat or danger.

Although some degree of anxiety is normal for a dog or a cat, some pets have anxiety that may result in behaviour that can make home life difficult. Early intervention allows anxiety to be identified as normal or abnormal.

How do I know if my dog and/or cat needs Solliquin?

Early recognition of anxiety disorders is critical in addressing the progression and intensifying of behaviour issues. Intervening early in destructive or other inappropriate behaviour can help modify behaviour before it becomes difficult to correct.

Common signs of fear and anxiety in dogs:

- Hiding and escaping
- Trembling and panting
- Destruction
- Excessive barking
- Inappropriate elimination
- Hyper-salivation

Common signs of fear and anxiety in cats:

- Over grooming
- Spraying
- Inter-cat aggression
- Elimination outside litterbox
- Hyper-ventilating
- Hiding

What is Solliquin?

Solliquin is for dogs and cats to help support normal behaviour and facilitate a calming effect. Solliquin combines, L-theanine, Magnolia and Phellodendron extracts and Whey protein concentrate in a tasty chewable tablet and soft chew.

What do the ingredients in Solliquin do?

The combination of the ingredients supports blocking excitatory receptors and helps support enhancing the release of calming factors.

L-theanine:
An amino acid found naturally in black, green and white teas.

Phellodendron amurense:
Fruit and bark extracts from the Amur cork tree.

This combination of ingredients provides a one of a kind formulation only available in

Solliquin

Magnolia officinalis:
An extract from the bark of the magnolia tree.

Whey protein concentrate:
A milk protein extract.
